Sector

EDUCATION

Postgraduate: Fatih University - İstanbul
MBA 09/2013 – 09/2014

University: Yıldız Teknik University – İstanbul
Mathematics Engineering 09/2000 – 08/2006

WORK EXPERIENCE

2018/4- Present

Software Developer at TOYOTA TURKEY

Dealer Management System

Toyota is a famous global car manufacturer. The company sells (50k/year cars in Turkey) Toyota brands cars all over the world. I am working as a Full-stack developer in a experienced developers team. The great majority of my work is on software architecture. There is a framework to generate screens in a desktop program with SOA architecture. I am tracking and managing incidents and implements some new features to framework. Also, I response developing Dealer Management System projects that use by 60 dealers 2000 account includes work orders, vehicle transportation, accounting, services,.. etc. I am learning Toyota way. PDCA methodology.

- Conversion project: I have coded a new Asp.Net Web API project (Avg 200k/day request. REST web service) instead of the old project that ASMX web service.
- Caching: We noticed users use very often some unchanged data, we decide caching strategies. The screens of program opened very slow (3 seconds), after the project it comes 1 second.
- Logging: We are logging some information and exception message with Log4Net.
- Use Solid principle and fix some smell codes: I have smart target to refactoring. And we measure our codes with SonarQube periodically. I detect some bad coding to refactor them.
- Implement new orders from other business teams. We are support ERP projects, so our program speaks the AS400 project with stored procedures. We prepare views and procs.
- Integration warehouse, logistics, accounting, order management.

2016/11 – 2018/1

Lead Developer at Meyer Group

Work hour management solution

Meyer is the biggest vendor work hour management solution of the fingerprint-based. I worked as a leader to developer and supporter team.

- Manage my team on projects which my responsible of the projects. After 40 projects. Such as Coka Cola, Daikin, Carrefour global firms, and banks, markets, hospitals, hotels, fabrics ...etc.
- Developing solutions for the companies that monitoring features in calculating compensations for business trips, special assignments, overtimes, and work-shifts, in addition to the employee's regular time of coming and leaving to work.
